● Suitable for application ○ Potential use

Disclaimer : The information included here is based on the most reliable data generated by our laboratories. Since the performance of a pigment also depends on the additives and polymers used, we recommend that customers should test the suitability of the pigment for their end application. However, if we are provided with testing methods and samples, we would be glad to do the same. We will do our best to provide a product of consistent quality, within the scope of the general conditions of sale and delivery. Should, in spite of these precautions, any liability be established, the damage, if any will be limited to the value of the goods delivered by us and used by you.

Caution : We do not recommend that any of our products are used in sensitive applications which may come in contact with internal body organs or body fluids.

Pigments

For Offset Inks

Publication and Commercial printing

Sudarshan produces a high quality range of classical organic pigments for the coloration of publication and commercial printing inks for magazines, direct mail and other commercial printing. Our products are commonly used in paste inks for heatset, sheet-fed, coldset, intaglio processes and in some cases UV curable inks.

Sudarshan process and spot colors

Our Cyan, Magenta and Yellow process pigments are highly dispersible, designed to achieve high pigments loading without adversely affecting the rheology of paste inks or the paint quality produced.

Color Reproduction

For technical reasons connected with color reproduction, the colors shown may not exactly match the pigment colors and do not represent a particular finish.
